THE IMPEMENTATION

The api4News website will feature a registration page that lets a user register with their credentials:

```
{
"email": "cliet@exampe.com",
"username": "username",
"password": "haashedPassword",
}
```

On registration the app generates for the user info to be stored on client schema

```
{
"api": "somerandom20CharacterText",
"type": "typeSelected",
"active": "true | false",
"plan": "trial | business | premium"
}
```
